

Up-to-the-Second Inventory Status

The UNISON Inventory Management module is designed to assist you in every phase of monitoring and managing your inventory assets. With UNISON, you can view instant, detailed status information for inventory quantity levels, including on-hand, committed, back-ordered, in transit, and on a purchase order as well as warehouse location and pricing / discounting options.

Warehouse Transfers

The Warehouse Transfer Program generates a complete paper trail (including picking tickets and packing slips) showing where stock is at all times. Using a separate program, the stock is received and, at this point, critical data such as unit and add-on cost can be updated. This program also uses automatic backorder fill to complete any transfers left open due to insufficient stock.

Simplified Physical Inventory

Keeping control of physical inventory is essential to your business. UNISON is carefully designed to simplify inventory management with easy-to-use entry programs and discrepancy reports.

Accurate and Timely Inventory Valuation

UNISON delivers a full complement of inventory valuation methods, all conforming to generally accepted accounting principles.

Replication of the Inventory Ledger Card

On-line viewing of the current item ledger card is available with every transaction affecting either the inventory status or the cost of an item, listed in chronological order.

Full Support of Start-up Kits and Assembly of Items

With the UNISON system, you gain the proper accounting capability for finished products and components for sales, inventory and royalty management.

Up-to-the-Second Inventory Status

With UNISON...

- ✓ With multiple warehouse locations, separate inventory amounts and pricing / discounting schemes can be established for each individual warehouse location.
- ✓ UNISON allows you to establish a substitute item or a substitute group of items to select from if the item being ordered is not available (out-of-stock). This feature can also be used to supply the operator with a list of similar or like items. Replacement items can also be set up to ship in the place of an item that no longer is available (out-of-print).
- ✓ UNISON will maintain future price update changes and will automatically activate these changes on a user-defined date.
- ✓ UNISON allows you to set up an item as an Inventory Set, establishing a list of questions and answers used to determine which format or version of a product to ship, such as operating system (Windows 95, 98, NT).
